## I. INTRODUCTION

### A. Risk Factors

#### **Standard Risk Factors:**

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- Religare Fixed Maturity Plan - Series XI - Plan C (13 Months) is the name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss or shortfall resulting from the operations of the Scheme beyond the contribution of Rs. 1,50,000/- (Rupees One Lakh Fifty Thousand Only) made by it towards the corpus of the Mutual Fund.
- The present Scheme is not a guaranteed or assured return scheme.

#### **Scheme Specific Risk Factors:**

- **Risk associated with Fixed Income and Money Market Instruments:**

#### **Interest - Rate Risk**

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However, in case of Government securities as credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.

In the case of floating rate instruments, an additional risk could arise because of the changes in the spreads of floating rate instruments. With the increase in the spread of floating rate instruments, the price can fall and with decrease in spread of floating rate instruments, the prices can rise. Moreover, the floating rate instruments having a periodical interest rate reset carry lower interest rate risk compared to a fixed rate debt security. However, in the falling interest rate scenario, the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.

#### **Credit Risk**

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may be affected because of change in the credit rating of the issuer/instrument and the price of a security goes down if the credit rating agency downgrades the rating of the issuer. In case of Government securities, there is minimal credit risk to that extent.

Different types of securities in which the Scheme would invest carry different types and levels of risk. Lower rated securities are more likely to react to developments affecting the market and credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated securities also tend to be more sensitive to economic conditions than higher rated securities.

#### **Liquidity or Marketability Risk**

This refers to the ease with which a security can be sold at or near to its valuation, i.e. yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between bid price and offer price quoted by a dealer.

Fixed income securities can be either listed on any stock exchange or may be unlisted. Moreover, the securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes and may lead to the Scheme incurring

losses till the security is finally sold. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

While money market instruments are fairly liquid but lack a well developed secondary market, which may restrict the ability of the Scheme to sell such instruments.

Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option. The Scheme would invest in the securities which are not listed but offer attractive yields. This may however increase the risk of the portfolio.

#### **Re-investment Risk**

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

- **Risks associated with Investing in Derivatives**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

- **Risks associated with Securities Lending**

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

- **Risks associated with Short Selling**

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme. At times, the participants may not be able to cover their short positions if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In additions, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

- **Risk Factors associated with Trading of Units on Stock Exchange(s)**

- Although Units of the Scheme as mentioned in this Scheme Information Document are to be listed on the Exchange, there can be no assurance that an active secondary market will develop or be maintained.

- The Units of the Scheme may trade above or below their NAV. The NAV of the Scheme will fluctuate with changes in the market value of Scheme's holdings. The trading prices of Units of the Scheme will fluctuate in accordance with changes in their NAV as well as demand and supply of the Units of the Scheme in the market.
- Trading in Units of the Scheme on the exchange may be halted because of market conditions or for reasons that in view of exchange authorities or SEBI, trading in Units of the Scheme is not advisable. In addition, trading in Units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of the Scheme will continue to be met or will remain unchanged.
- The Units will be issued in demat form through depositories. The records of the depository are final with respect to the number of Units available to the credit of Unit holder. Settlement of trades, repurchase of Units by the Mutual Fund on the Maturity Date / Final Redemption Date will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.
- As the Units allotted under Scheme will be listed on the Exchange, the Mutual Fund shall not provide for redemption / repurchase of Units prior to Maturity Date / Final Redemption Date of the Scheme.

**B. Requirement of Minimum Investors in the Scheme**

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Scheme shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 Business Days from the date of closure of the New Fund Offer.

However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns.

### C. ASSET ALLOCATION PATTERN

Under normal circumstances, the asset allocation of the Scheme would be as follows:

Instruments	Indicative allocations ( % of total assets)		Risk Profile
	Minimum	Maximum	High/Medium/Low
Debt Instruments including Money Market Instruments	0	100	Low

The Scheme will not invest in securitized debt and un-rated debt instruments.

The Scheme may use derivatives for purposes as may be permitted from time to time. The maximum gross derivative position will be restricted to 50% of the net assets of the Scheme.

However, the aggregate asset allocation including exposure to derivatives will not exceed 100% of net assets of the Scheme, subject to SEBI circular dated August 18, 2010 w.r.t. investments in derivatives. For the purpose of calculating aggregate asset allocation, derivative exposure to create security wise hedge position will not be included.

In addition to the instruments stated in the table above, the Scheme may enter into repos/reverse repos as may be permitted by RBI. From time to time, the Scheme may hold cash. A part of the net assets may be invested in the Collateralised Borrowing & Lending Obligations (CBLO) or repo or in an alternative investment as may be provided by RBI.

The Scheme may engage in short selling of securities in accordance with the framework relating to short selling and securities lending and borrowing specified by SEBI.

The Scheme shall not deploy more than 20% of its net assets in securities lending and not more than 5% of the net assets of the Scheme will be deployed in securities lending to any single counterparty.

Pending deployment of the funds in securities in terms of investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of the Scheduled Commercial Banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007, as may be amended from time to time.

Subject to the SEBI (MF) Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute. These proportions can vary substantially depending upon the perception of the fund manager, the intention being at all times to seek to protect the interests of the Unit holders. Change in the investment pattern for defensive considerations will be in the interest of

unit holders and for short term only. The fund manager will restore asset allocation in line with the asset allocation pattern within 1 month.

**D. WHERE WILL THE SCHEME INVEST?**

The corpus of the Scheme will be invested in debt and money market instruments maturing on or before the date of maturity of the Scheme. Debt and money market instruments will include but not limited to:

1. Certificate of Deposits (CDs) is a negotiable money market instrument issued by scheduled commercial banks and select all-India Financial Institutions that have been permitted by the RBI to raise short term resources. The minimum denomination of CD should be Rs. 1 Lac and in multiples of Rs. 1 Lac thereafter. The maturity period of CDs issued by the Banks is between 7 days to one year, whereas, in case of FIs, maturity is between one year to 3 years from the date of issue. CDs may be issued at a discount to face value. Banks/ FIs can not buyback their own CDs before maturity.
2. Commercial Paper (CPs) is an unsecured negotiable money market instrument issued in the form of a promissory note, generally issued by the corporates, primary dealers and all India Financial Institutions as an alternative source of short term borrowings. They are issued at a discount to the face value as may be determined by the issuer. CP is traded in secondary market and can be freely bought and sold before maturity.
3. Treasury Bills (T-Bills) are issued by the Government of India to meet their short term borrowing requirements. T-Bills are issued for maturities of 91 days, 182 days and 364 days. T-bills are issued at a discount to their face value and redeemed at par.
4. Collateralised Borrowing and Lending Obligations (CBLO) is a money market instrument that enables entities to borrow and lend against sovereign collateral security. It is in electronic form. The maturity ranges from 1 day to 90 days and can also be made available upto 1 year. Central Government securities including T-bills are eligible securities that can be used as collateral for borrowing through CBLO.
5. Securities created and issued by the Central and State Governments as may be permitted by RBI, securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills). Central Government securities are sovereign debt obligations of the Government of India with zero-risk of default and issued on its behalf by RBI. They form part of Government's annual borrowing programme and are used to fund the fiscal deficit along with other short term and long term requirements. Such securities could be fixed rate, fixed interest rate with put/call option, zero coupon bond, floating rate bonds, capital indexed bonds, fixed interest security with staggered maturity payment etc. State Government securities are issued by the respective State Government in co-ordination with the RBI.
6. Non convertible debentures as well as bonds are securities issued by companies / institutions promoted / owned by the Central or State governments and statutory bodies, which may or may not carry a Central/State government guarantee, public and private sector banks, All India Financial Institutions, private sector companies. These instruments may be secured against the assets of the company or may be unsecured and are generally issued to meet the short term and long term fund requirements. Rate of interest on such instruments would depend upon spread over corresponding Government security, perceived risk, rating, tenor etc. These instruments include fixed interest security with/without put/call option, floating rate bonds, zero coupon bonds. Frequency of the interest payment could be either monthly/quarterly/half-yearly or annually.
7. Floating rate debt instruments are debt instruments issued by Central government, State government, corporates, PSUs etc. with coupon reset periodically. The periodicity of reset could be daily, monthly, quarterly, half yearly and annually or any other periodicity as may be mutually agreed between the issuer and the Fund. The fund manager will have the flexibility to invest the debt component into floating rate debt securities in order to reduce the impact of rising interest rate in the economy. Short term debt consideration for this Scheme includes maintaining an adequate float to meet expenses and other liquidity needs.
8. Repo (Repurchase Agreement) or Reverse Repo is a transaction in which two parties agree to sell and purchase the same security with an agreement to purchase or sell the same security at a mutually decided future date and price. The transaction results in collateralized borrowing or lending of funds. When the seller sells the security with an agreement to repurchase it, it is Repo transaction whereas from the perspective of buyer who buys the security with an agreement to sell it at a later date, it is reverse repo transaction. Presently in India, G-Secs, State Government securities and T-Bills are eligible for Repo/Reverse Repo.

9. When, as and if issued' (commonly known as "when-issued" (WI)) security refers to a security that has been authorized for issuance but not yet actually issued. WI trading takes place between the time a new issue is announced and the time it is actually issued. All "when issued" transactions are on an "if" basis, to be settled if and when the actual security is issued. SEBI has on April 16, 2008, in principle allowed Mutual Funds to undertake 'When Issued (WI)' transactions in Central Government securities, at par with other market participants.

Transaction in a security on 'When Issued' basis shall be undertaken in the following manner.

- 'WI' transactions can be undertaken in the case of securities that are being reissued as well as newly issued, on a selective basis.
- 'WI' transactions would commence on the issue notification date and it would cease on the working day immediately preceding the date of issue.
- All 'WI' transactions for all trade dates will be contracted for settlement on the date of issue.
- At the time of settlement on the date of issue, trades in the 'WI' security will be netted off with trades in the existing security, in the case of reissued securities.
- 'WI' originating transaction may be undertaken only on NDS-OM. However, undertaking the cover leg of the 'WI' transactions is permitted even outside the NDS-OM platform, i.e., through telephone market.
- The transaction should be guaranteed by an approved Central counterparty namely Clearing Corporation of India Limited (CCIL).
- Only PDs can take a short position in the 'WI' market. In other words non-PD entities can sell the 'WI' security to any counterparty only if they have a preceding purchase contract for equivalent or higher amount.
- Open Position in the 'WI' market are subject to the following limits:

Category	Reissued Security	Newly Issued Security
Non-PDs	Long Position, not exceeding 5 percent of the notified amount.	Long Position, not exceeding 5 percent of the notified amount.

10. Any other Scheme of Religare Mutual Fund or of any other mutual fund provided such investment is in conformity with the investment objective of the Scheme. Such investment will be subject to limits specified under SEBI (MF) Regulations and AMC will not be entitled to charge management fees on such investments.
11. Derivative Instrument like Interest Rate Swaps, Forward Rate Agreement and such other derivative instruments as may be permitted under the Regulations.
- Interest Rate Swap - An Interest Rate Swap (IRS) is a financial contract between two parties exchanging or swapping a stream of interest payments for a "notional principal" amount on multiple occasions during a specified period. Such contracts generally involve exchange of a "fixed to floating" or "floating to fixed rate" of interest. Accordingly, on each payment date that occurs during the swap period, cash payments based on fixed/ floating and floating rates are made by the parties to one another.
  - Forward Rate Agreement - A Forward Rate Agreement (FRA) is a financial contract between two parties to exchange interest payments for a 'notional principal' amount on settlement date, for a specified period from start date to maturity date. Accordingly, on the settlement date, cash payments based on contract (fixed) and the settlement rate, are made by the parties to one another. The settlement rate is the agreed bench-mark/ reference rate prevailing on the settlement date.
12. Pending deployment of funds as per the investment objective of the Scheme, the funds may be parked in short term deposits of the Scheduled Commercial Banks, subject to guidelines and limits specified by SEBI.
13. Any other domestic debt securities as permitted by SEBI/RBI from time to time.

The securities / instruments mentioned above and such other securities that the Scheme is permitted to invest in will be rated and could be listed, unlisted, privately placed, secured, unsecured and maturing on or before the date of maturity of the Scheme. The securities may be acquired through initial public offering (IPOs), secondary market, private placement, rights offers, negotiated deals.

Further investments in debentures, bonds and other fixed income securities will be in instruments which have been assigned investment grade rating by the credit rating agency.

### Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and Public Sector Enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates.

The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz., Government securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds. The Government securities (G-sec) market, with market capitalization of Rs. 22,97,639 Crores as at August 30, 2011 (Source: NSE), is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The outstanding dated securities of the Government of India is Rs. 23,60,184 Crores as on August 2011 as compared to Rs. 20,79,551 Crores as on August 2010 (Source: NSE). The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the government securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc. The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian debt market. The total traded volume in corporate bonds during April-August 2011 was Rs. 65,560 Crores. (Source: NSE). A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

In money market, activity levels of the Government and non-government debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Collateralised Borrowing & Lending Obligations (CBLO)
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government Securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as money market instruments, PSU / DFI /Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The following table gives approximate yields prevailing on November 28, 2011 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro economic conditions and RBI policy.

Instrument	Current Yield (% p.a.)
CBLO	8.62
Repo	8.50
91 Day T-Bill	8.84

182 Day T-Bill	8.79
364 Day T-Bill	8.71
GOI Securities (10Years)	8.83
State Government (10Years)	9.06

**Source: Bloomberg**

The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

### **SECURITIES LENDING**

Securities lending means the lending of securities to another person or entity for a fixed period of time, at a negotiated compensation in order to enhance returns of the portfolio. The securities lent will be returned by the borrower on the expiry of the stipulated period.

Subject to the SEBI (MF) Regulations, the Scheme may engage in securities lending. Such lending shall be made when in view of the fund manager, such lending could provide reasonable returns commensurate with risks associated with such lending and shall be made in accordance with the investment objective of the Scheme.

The fund manager will apply the following limits with respect to securities lending:

- Not more than 20% of the net assets of the Scheme can generally be deployed in securities lending; and
- Not more than 5% of the net assets of the Scheme can generally be deployed in securities lending to any single counter party.

### **E. INVESTMENT STRATEGY**

The investment objective of the Scheme would be achieved by investing in a portfolio of debt and money market instruments maturing on or before the date of maturity of the Scheme.

Under normal circumstances, passive portfolio management strategy would be adopted.

The fund manager will follow a strict disciplined investment process to meet the investment objective of the Scheme. The fund manager will carry out rigorous in depth credit evaluation of the money market and debt instruments proposed to be invested in. The credit evaluation includes a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term/ long term financial health of the issuer. Internal research and ratings issued by credit rating agencies will be used as the guide to credit quality.

### **Additional disclosure pursuant to SEBI circular dated August 1, 2011:**

#### **a) Credit Evaluation Policy:**

Credit Evaluation Policy for investment in debt securities evaluates various factors which determine the repayment ability of the borrower/issuer. Investment team has a dedicated credit analyst for conducting the due-diligence and thorough analysis of each company. The due diligence process includes studying economic risk, industry risk, business risk, financial risk and management risk. For evaluating industry risk, some key factors pertinent across industries which are evaluated include size, historical growth, competitive scenario, demand/supply dynamics, entry barriers (if any), profitability, cyclicality, vulnerability to technological changes, regulatory environment & political environment etc. The credit analyst prepares a detailed research report based on the credit evaluation model which takes into account both qualitative and quantitative parameters. The research report includes a detailed analysis of the financial data of the previous 3 years and qualitative factors like the sector in which the company operates, the management track record, internal control systems, acceptability of the products of the company in the market, past track record of any defaults to their creditors etc. Further conference calls/meetings with the management of the company are arranged in order to seek further clarifications about the business and financial performance of the company and understand

its strategies going forward. The financial analysis of the company is also compared against its peers to measure relative strengths and weaknesses. The report from the credit analyst is an independent opinion based on the credit risk analysis.

- b) The Scheme shall not invest in debt securities issued by corporate operating in real estate, construction, textiles and gem & jewellery.
- c) Floors and ceilings within a range of 5% of the intended allocation against each sub asset class/credit rating will be as follows:

<b>Instruments\ Credit Rating</b>	<b>AAA/ equivalent</b>	<b>AA/ equivalent*</b>	<b>A/ equivalent*</b>
Certificate of Deposits (CDs)	-	-	-
Commercial Papers (CPs)	95%-100%	-	-
Non-Convertible Debentures (NCDs)	-	-	-
Securitized Debt	-	-	-
Others	0%-5%	-	-

\*Securities with rating A and AA shall include A+ and A- & AA+ and AA- respectively.

- d) Positive variation in investment towards higher credit rating in the same instrument shall be allowed.
- e) In case of non availability of and taking into account the risk-reward analysis of CPs, NCDs (including securitized debt), the Scheme may invest in highest rated CDs and CBLO.
- f) At the time of building up the portfolio post NFO and towards the maturity of the Scheme, there may be a higher allocation to cash and cash equivalent.
- g) All investment shall be made based on the rating prevalent at the time of investment. However, in case of an instrument having dual ratings, the most conservative publicly available rating would be considered.
- h) In the event of any deviations from the floor and ceiling of credit ratings specified for any instrument, the same shall be rebalanced with 30 days from the date of the said deviation.

There will not be any variation between the intended portfolio allocation and the final portfolio allocation except the exceptions mentioned in d, e, f, h above.

### **Risk Control**

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to VAR, tracking error etc. Further AMC has implemented Bloomberg Portfolio Management System as Front Office System (FOS) for managing risk. The system has inbuilt feature which enables the fund manager to calculate various risk ratios, average duration and analyze the same.

### **INVESTMENT IN DERIVATIVES**

The Scheme may use derivative instruments like Interest rate swaps like Overnight indexed swaps (OIS), forward rate agreements or such other derivative instruments as may be permitted under the Regulations. Derivatives will be used for the purpose of hedging, increasing the returns of the

Scheme and portfolio balancing or such other purpose as may be permitted under the Regulations and Guidelines from time to time.

### **Using Overnight Indexed Swaps**

In a rising interest rate scenario, the Scheme may enhance returns for the investor by hedging the risk on its fixed interest paying assets by entering into an OIS contract where the Scheme agrees to pay a fixed interest rate on a specified notional amount, for a pre determined tenor and receives floating interest rate payments on the same notional amount. The fixed returns from the Scheme's assets and the fixed interest payments to be made by the Scheme on account of the OIS transaction offset each other and the Scheme benefits on the floating interest payments that it receives.

The Scheme may enter into an opposite position in case of a falling interest rate scenario, i.e. to hedge the floating rate assets in its portfolio the Scheme enters into an OIS transaction wherein it receives a fixed interest rate on a specified notional amount for a specified time period and pays a floating interest rate on the same notional amount. The floating interest payments that the Scheme receives on its floating rate securities and the floating interest payments that the Scheme has to pay on account of the OIS transaction offset each other and the Scheme benefits on the fixed interest payments that it receives in such a scenario.

### **Swap**

Assume that the Scheme has a Rs. 20 crore floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the Scheme is currently running an interest rate risk and stands to lose if the interest rate moves down. To hedge this interest rate risk, the Scheme can enter into a 6 month MIBOR swap. Through this swap, the Scheme will receive a fixed predetermined rate (assume 12%) and pays the "benchmark rate" (MIBOR), which is fixed by the NSE or any other agency such as Reuters. This swap would effectively lock-in the rate of 12% for the next 6 months, eliminating the daily interest rate risk. This transaction is usually routed through an intermediary who runs a book and matches deals between various counterparties.

The steps will be as follows:

Assuming the swap is for Rs. 20 Crores for June 1, 2010 to December 1, 2010. The Scheme is a fixed rate receiver at 12% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).

On June 1, 2010 the Scheme and the counterparty will exchange only a contract of having entered this swap. This documentation would be as per International Swap Dealers Association (ISDA) norms.

On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On December 1, 2010 they will calculate the following:

- The Scheme is entitled to receive interest on Rs. 20 Crores at 12% for 184 days i.e. Rs. 1.21 Crores, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
- The counterparty is entitled to receive daily compounded call rate for 184 days & pay 12% fixed.
- On December 1, 2010, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 1.21 Crores, the Scheme will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Scheme the difference.
- Effectively the Scheme earns interest at the rate of 12% p.a. for six months without lending money for 6 months fixed, while the counterparty pays interest @ 12% p.a. for 6 months on Rs. 20 Crores, without borrowing for 6 months fixed.

The above example illustrates the benefits and risks of using derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk.

However, these risks are substantially reduced as the amount involved is interest streams and not principal.

#### **Forward Rate Agreement**

Assume that on June 30, 2010, the 30 day commercial paper (CP) rate is 6.75% and the Scheme has an investment in a CP of face value Rs. 50 Crores, which is going to mature on July 31, 2010. If the interest rates are likely to remain stable or decline after July 31, 2010, and if the fund manager, who wants to re-deploy the maturity proceeds for 1 more month does not want to take the risk of interest rates going down, he can then enter into a following forward rate agreement (FRA) say as on June 30, 2010:

He can receive 1 X 2 FRA on June 30, 2010 at 6.75% (FRA rate for 1 months lending in 2 months time) on the notional amount of Rs. 50 Crores, with a reference rate of 30 day CP benchmark. If the CP benchmark on the settlement date i.e. July 30, 2010 falls to 6.50%, then the Scheme receives the difference 6.75 - 6.50 i.e. 25 basis points on the notional amount Rs. 50 Crores

Certain risks are inherent to derivative strategies viz. lack of opportunities, inability of derivatives to correlate perfectly with the underlying and execution risks, whereby the rate seen on the screen may not be the rate at which the transaction is executed. For details of risk factors relating to use of derivatives, the investors are advised to refer to Scheme Specific Risk Factors.

#### **PORTFOLIO TURNOVER**

The Scheme being a close ended debt Scheme, there would not be subscriptions and redemptions on a daily basis. Under normal circumstances, the fund manager will follow passive portfolio management strategy. In view of the nature of the Scheme, there is likely to be no turnover in the portfolio of the Scheme (except for change in composition of portfolio of securities made as per the prevailing market conditions like changes in interest rate policy announced by RBI, shifts in the yield curve, credit rating changes etc.). However, it is difficult to measure with reasonable accuracy, the likely turnover in the portfolio of the Scheme.

#### **INVESTMENT BY THE AMC IN THE SCHEME**

The AMC may invest in the Scheme during the New Fund Offer Period. In addition the AMC may purchase units of the Scheme directly from the Stock Exchange(s) after the Units are listed on the Stock Exchange, subject to the SEBI (MF) Regulations. As per the existing SEBI (MF) Regulations, the AMC will not charge investment management and advisory fee on the investment made by it in the Scheme.

- The Unit holders are given an option for a period of 30 days to exit at the prevailing Net Asset Value without any exit load.

#### **G. BENCHMARK INDEX**

The Benchmark index for the Scheme is CRISIL Short-Term Bond Fund Index. The performance of the Scheme will be compared with that of benchmark index. In terms of investment objective, asset allocation pattern, the Scheme will be investing in debt instruments of maturity upto 13 Months. Hence, CRISIL Short-Term Bond Fund Index is most suitable index for the Scheme.

##### **About CRISIL Short-Term Bond Fund Index (STBEX):**

CRISIL Short-Term Bond Fund Index (STBEX) is best suited as benchmark for the Schemes having maturity of more than 3 months / 91 days and upto 36 months as the index tracks the return of short-term funds based on their asset allocation pattern on a rolling three-month average. The portfolio of these funds includes call instruments, commercial paper, government securities as also the AAA and AA rated instruments. This is a realistic estimate for short-term Schemes that tend to invest in all of the instruments mentioned above to maximize returns at a particular level of risk. The Short-Term Bond Index is required to track the relative returns generated by a portfolio (benchmarked against the returns generated by the index on a daily basis) that includes all of the aforementioned instruments. Since the resulting index is a derived index rather than a primary index, it also serves as a benchmark for non-diversified market participants to evaluate their performance against a diversified portfolio containing a mix of all the instruments in the universe of non- equity instruments. Finally, the index is a useful tool to track volatility, charting correlation and developing hedging instruments.

- The CRISIL Short-Term Bond Fund Index consists of tracking the returns on the constituents like the Call Index, the CP Index, the AAA Index, AA Index and the Gilt Fund Index (Short: Medium in a 70: 30 ratio) to arrive at the index figure.

- The Weighted Average Methodology is used to arrive at the returns for the Short-Term Bond Index.

Index value as on November 24, 2011 is 1,804.57 (Source: AMFI)

The Trustee / AMC reserve the right to change the benchmark for evaluation of performance of the Scheme from time to time in conformity with the investment objectives and appropriateness of the benchmark subject to the SEBI (MF) Regulations and other prevailing guidelines.
